*Held 100% by wholly owned subsidiary Kaili Gold Pty Ltd*

**Figure 2: Location of Lameroo, Karte and Coodalya Rare Earth Exploration Tenements in Murray Basin, Limestone Coast, South Australia**

The 3 tenements with Coodalya within 50 kms NW of contiguous Lameroo and Karte cover a total area of 1,985 km<sup>2</sup> approximately 200 kms east of Adelaide within the Loxton/Parilla Sands in the Murray Basin in South Australia.

The Company is targeting the Loxton/Parilla sands for Rare Earth Elements (“REE”) mineralisation. REEs are reportedly contained within the fine clay fraction of Tertiary (65 to 2.5 Million Years Ago) Strandlines (ionic clay style of deposit) in the region.

South of the Company’s tenements explorer Australian Rare Earths Limited (AR3:ASX) has reported exploration success with estimated JORC 2012 resource of 186Mt @ 712ppm Total Rare Earth Oxides (TREO) (see AR3 ASX Release of Quarterly Activities Report on 24<sup>th</sup> January 2024).

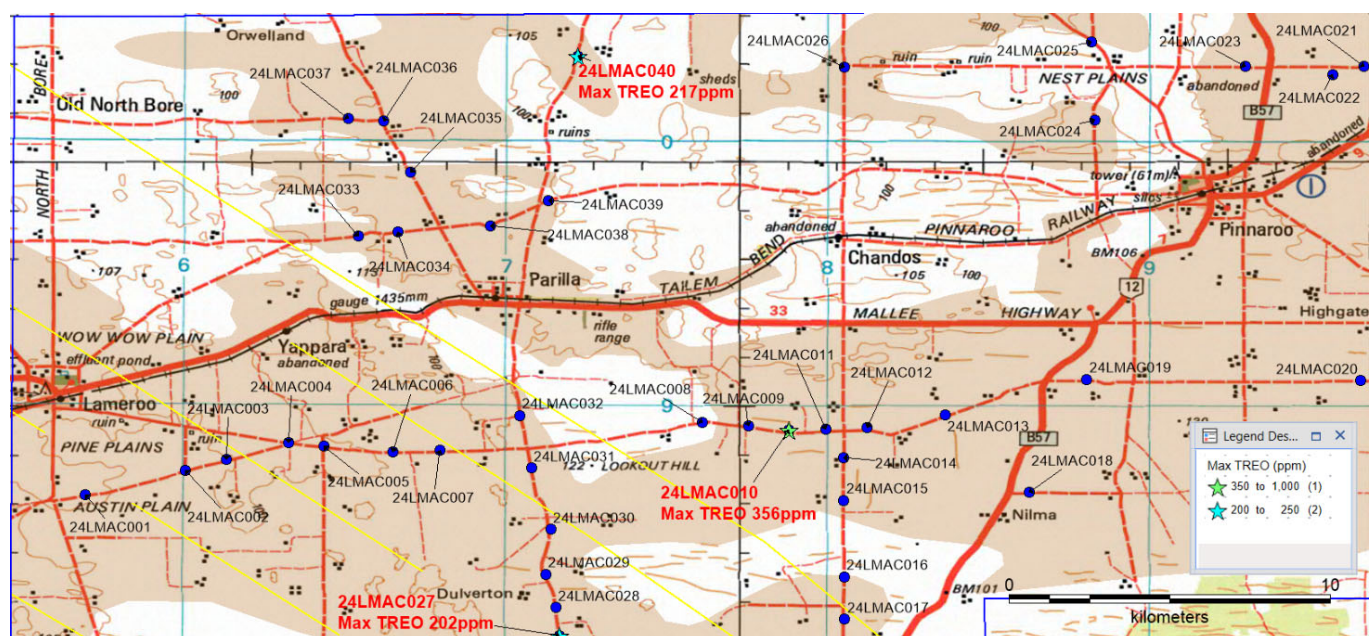

In prior periods, the Company had conducted pXRF scan of samples from selected historic drill holes held by the SA Government, and collected and assayed samples from fresh outcropping granite at Lameroo. Having regards to the information obtained the Company completed an initial low cost and widely spread drilling program along road verges at Lameroo in February 2024 while awaiting the grant of Karte and Coodalya which were granted also in February 2024.

The assay results of the initial drilling program received in March 2024 were encouraging. During the quarter, they have been used as reference in the design, planning and budgeting of larger drill programs across all 3 tenements to be conducted in forthcoming quarters.

A summary of significant Total Rare Earth Oxides (“TREO”) drilling intersections in February 2024 are as follows:

- 1m @ 356 ppm from 18 m - 19 m LMAC046
- 1m @ 271 ppm from 2 m - 3 m LMAC032
- 1m @ 228 ppm from 19 m - 20 m LMAC047

Magnetic (Battery) Rare Earth Oxides - MREO (Tb+ Dy+ Pr+ Nd) comprise on average 17% of the TREO. (See the Company’s ASX Announcement on 25<sup>th</sup> March 2024 for the JORC table and list of results for each hole.)

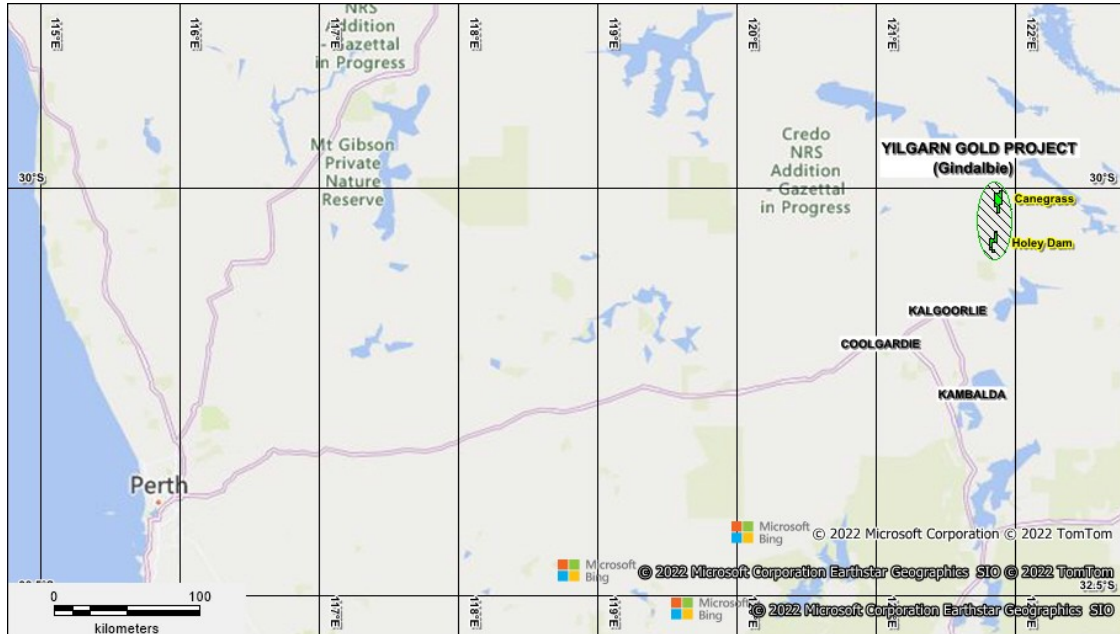

**Figure 3: Location of Lameroo Aircore Drill Holes (LM series) within the target Loxton/Parill Sands (brown) and showing maximum ppm TREO in the hole**

## **Yilgarn Craton (Gindalbie) Gold and Critical Metals Project in Western Australia**

### ***Canegrass E31/1113 and Holey Dam E27/550***

*Held 100% by wholly owned subsidiary Kaili Gold Pty Ltd*

**Figure 4: Kaili Resources Yilgarn Gold Tenement Locations**

Since late 2023 when the results of an RC drilling program identified elevated Total Rare Earth Oxides (“TREO”) from the saprolite zone overlying altered and veined mafic intrusive/extrusive rocks the Company has changed its focus from gold to Rare Earth exploration within the Holey Dam tenement. The results indicated a zone of TREO enrichment at the base of the saprolite clays above partially weathered mafic rocks, a location termed BOCO (Base of Complete Oxidation) and is just above the partially altered basalt or “saprock”.

The results from 2 holes at Holey Dam in 2023 (*see ASX Announcement of 12 October 2023*) were as follows:

#### **HDRC002**

- 4 m composite interval 48 m -52 m returned 451.6 ppm TREO
- 52 m – 56 m returned 453.7 ppm TREO
- 53 m – 54 m returned 757.3 ppm TREO

#### **HDRC001**

- 4 m composite interval 24 m – 28 m returned 591.4 ppm TREO
- 12 m composite interval 52 m – 64 m returned 477.34 ppm including 1 m @ 609.38 ppm

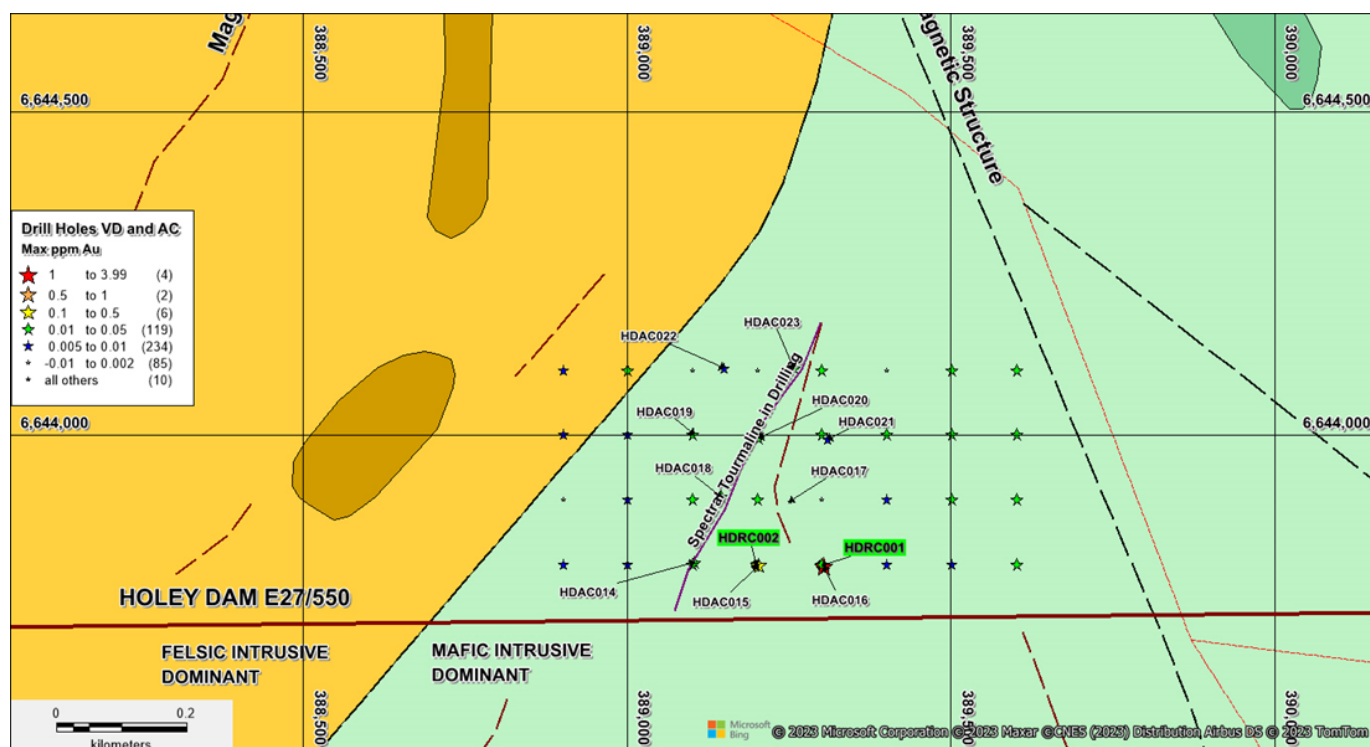

The 4 m composite intervals were re-sampled in single metre intervals from these zones for a total of 59

samples to further delineate and identify any potentially higher-grade rare earth mineralisation.

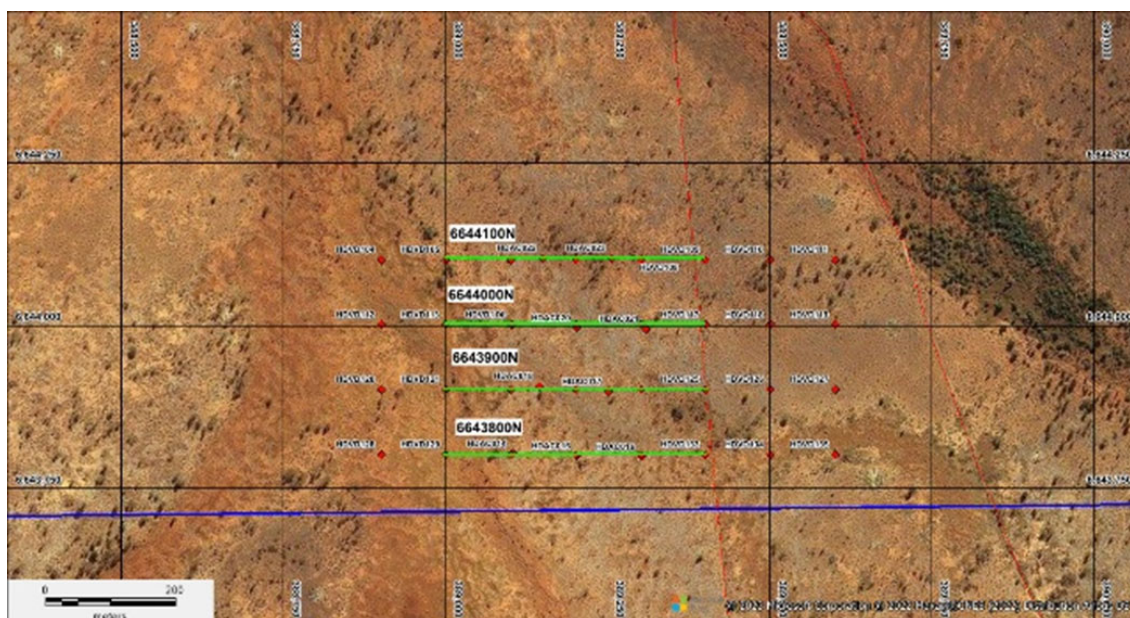

The results received in November 2023 (*see ASX Announcement of 20 November 2023*) of the single metre intervals re-sampling for Holey Dam were as follows:

- HDRC001: 4 m @ 546 ppm TREO from 24 m - 28 m and 6 m @ 641 ppm TREO from 52 m - 58 m including 1 m @ 866 ppm from 54 m - 55 m.
  
- HDRC002: 1 m @ 586 ppm TREO from 20 m - 21 m and 5 m 628 ppm TREO from 48 m to 54 m including 1 m @ 709 ppm TREO from 50 m - 51 m and 1 m @ 850 ppm TREO from 53 m - 54 m.
  
- High value Battery Metal Elements Pr, Nd, Dy and TB constitute between 20% and 30% of the individual sample assays.

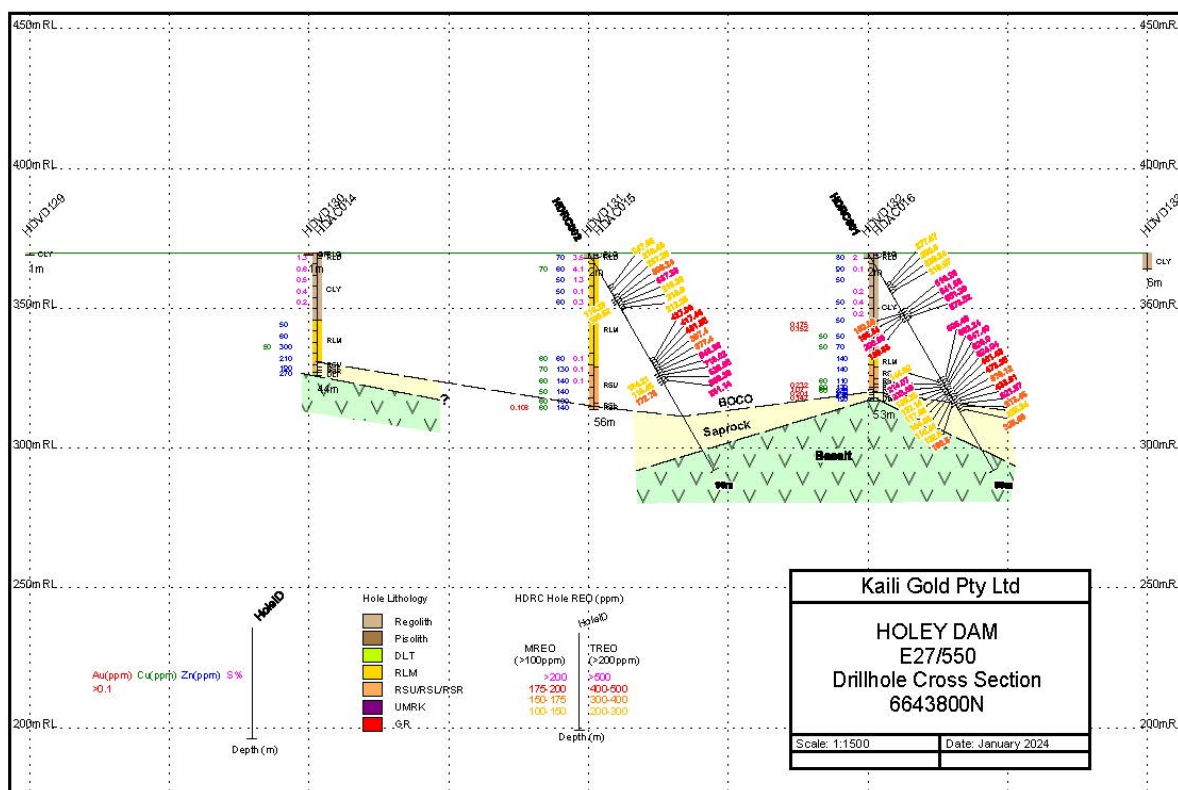

During the Quarter the Company has been preparing further scan by pXRF, commenced in the previous quarter, of samples from the Saprolite Zone in holes drilled by the Company during past exploration. Selected samples to be sent for assay at the laboratory for a multi element suite including REE minerals Nd, Pr, Ce, La and Y. The results to be used to plan further drilling for REE mineralisation assessment.

**Figure 5: Holey Dam Drill Collar Locations and Interpreted Geology**

**Figure 6: Holey Dam Drill Sections Lines**

**Figure 7: Holey Dam Drill Section 664380**

### **Planned Future Exploration Activities:**

- Review all results from the surface geochemical sampling and drilling at Canegrass and Holey Dam.
- Review the results of pXRF scans and laboratory assays of previously completed Aircore Holes in the Saprolite Zone for a multi element suite including REE minerals Nd, Pr, Ce, La and Y.
- Plan further drilling to test extent of REE mineralisation.

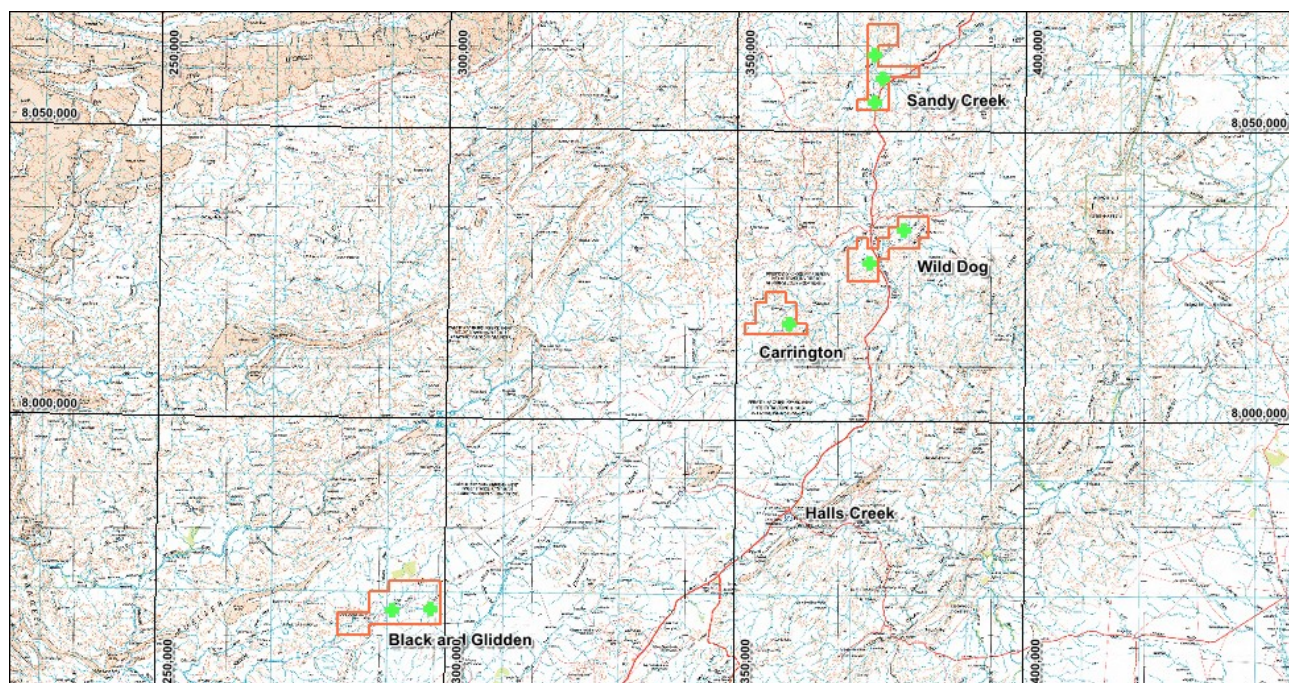

### **Halls Creek – Gold/Cobalt/Copper/Nickel Exploration Projects - Western Australia**

**Black and Glidden E 80/5112, Carrington E 80/5113, Sandy Creek E 80/5114, and Wild Dog E80/5115**

*Held 100% by wholly owned subsidiary Kaili Iron Pty Ltd.*

The Company awaits responses from Native Title groups on the proposed field work programs to be conducted during the current 2024 dry season.

Site heritage surveys were suggested by the Traditional Owners prior to their considering approvals for the Company to conduct soil and rock sampling programs. Some areas for the planned field work are not accessible by road and several trips by helicopter will be required making the exercise high cost. The logistics of the exercise has not yet been agreed with the Traditional Owners.

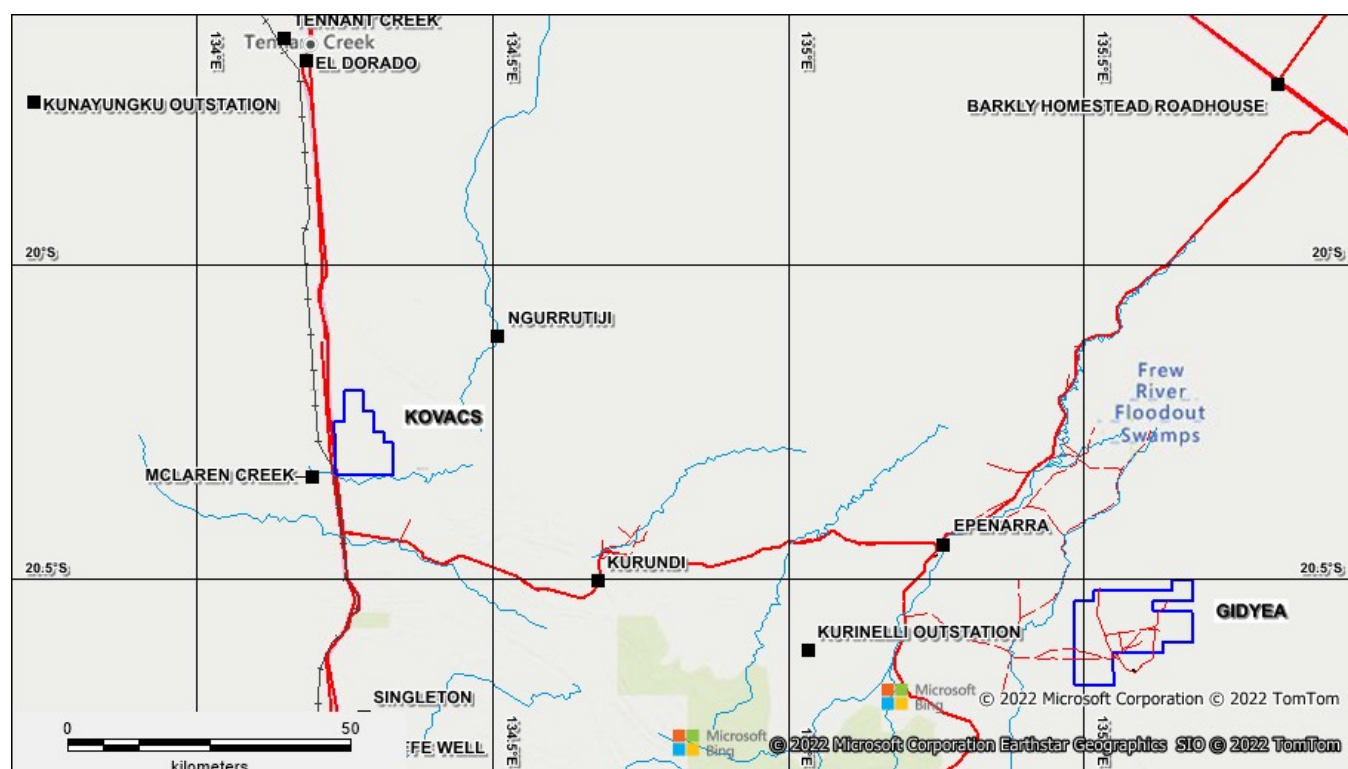

**Figure 8: Halls Creek Project showing the 2021 soil sampling grids in green**

### Planned Future Exploration Activities:

- Review targets planned for next phase of helicopter supported exploration.
- Follow up with the Kimberley Land Council as to the heritage requirements for the next phase of exploration.
- Follow up surficial geochemical exploration.

### Tennant Creek – Gold and Copper Exploration Projects - Northern Territory Kovacs ELA 32666

*Held 100% by wholly owned subsidiary Kaili Gold Pty Ltd.*

**Figure 9: Regional Tenement Location SE of Tennant Creek – Kovacs**

There has been no exploration activity during the quarter as the Company awaits the grant of the exploration licence under application ELA 32666 Kovacs south of Tennant Creek lodged in February 2021.

Background information on the geology of the region and licence areas is contained in the Activities Report released to ASX on 30 January 2023.
